For Immediate Release:

SOS® - Siren-Operated Sensor Advances Electronic Gate Opening with Two New Products

Twin Falls, ID, May 16, 2019 — SOS® — Siren-Operated Sensor is pleased to introduce two new products that ensure emergency vehicles fast access to any gated facility by simply activating the vehicle siren — saving precious response time in an emergency.

The first new product is the **SOS-12** – Siren-Operated Sensor. Totally redesigned, with more features and faster gate opening response time for faster access.

- New sleek, stealth design and color that blends into surroundings to go unnoticed.
- Tough, NEMA 4 compliant enclosure with larger internal gaskets for greater protection of electronic components.
- Up-front microphone quickly detects vehicle siren “Yelp” for even faster openings.
- The latest electronic design and circuitry ensures fast gate response and long sensor life.

Next, the new **SOS-RM** – Remote Microphone. Extends the reach of the SOS-12 sensor. The remote microphone can be placed up to 50’ away from the SOS-12 unit. This allows the SOS-12 unit to be installed in a cabinet inside a guard shack or another remote location.

“The new SOS-12 and SOS-RM units are the result of our continuous product improvement process. Since 1992, our goal has been to provide emergency vehicle sensors and devices that are increasingly more durable, responsive, and easy to install,” said McKay Lundgren, President, SOS - Siren-Operated Sensor.

About SOS® - Siren-Operated Sensor

Since 1992, the original SOS® - Siren-Operated Sensor has provided electronic gate access systems for fast and secure emergency access to:

- | | | |
|-------------------------|---------------------|---------------------|
| Residential homes | Commercial Property | Apartment Buildings |
| Home Owner Associations | Healthcare Campuses | Airports |
| Government Properties | Military Facilities | Parking Garages |

SOS opening devices are America's most widely used emergency gate access systems and are used throughout the Americas and Europe. If a Gate, Door, Parking Arm, Barrier, Electronic Lock, or Roll-Up Door needs to open for emergency responders – the SOS – Siren-Operated Sensor is a proven sensing and opening device. Once the "Yelp" siren has been recognized, a signal is sent to open the gate. The SOS is the most cost-effective way for emergency responders to access a gated home, business, or public facility without stopping or leaving their vehicle to enter a code or to use a key. SOS Emergency Access Systems are now mandatory in many communities throughout the world due to the reliability and ease of use. With an SOS activated gate, critical time is saved in reaching an emergency event.
